

# SMARTDRIVE 360: CAPTURING RISK FROM ALL ANGLES

Most video-based safety systems provide a forward-facing camera to capture what's happening in front of a vehicle and some include an interior-facing camera to capture what's happening inside the vehicle.

SmartDrive takes video-based safety to the next level. In addition to having both forward-facing and interior-facing cameras, you have the option to deploy up to two additional cameras - enabling a 360-degree view of the vehicle and insight to the riskiest related driving performance, such as hard braking, reversing, unsafe lane changes, unsafe merging and close following - delivering an unprecedented level of coverage and complete visibility to risk.

These extra eyes on the road, and around the vehicle, provide additional context for driving-related situations and ensure compliance for work being done outside the vehicle.

## 360-DEGREE VIDEO INSIGHT

With 35% of collisions typically being side and rear incidents, the enhanced visibility down the sides of the vehicle and trailer provides insight to the situations drivers face every day - ensuring maximum protection of drivers and fleet assets. For those fleets facing mystery damage or theft, additional cameras provide added protection when and where you need it most.

*“Our drivers recognised, early on, that more cameras equal more protection. While I know many fleets are concerned about driver reaction to video, our drivers not only loved SmartDrive’s programme when we had cab- and road-facing cameras, they asked for more video when given the opportunity.”*

– Tom Halpin, Transportation Safety Manager, Bozzuto’s

# SMARTER FLEETS SAFER FLEETS

## AUTOMATIC TRIGGERS. **AUTOMATIC DOWNLOADS.**

SmartDrive 360 is an optional service that accelerates your visibility into driving-related incidents, risk and compliance violations by automatically providing you with video from up to four cameras. When a vehicle with SmartDrive 360 performs a risky manoeuvre, video from all four cameras is captured and automatically off-loaded from the event recorder - making that video available in line with the standard SmartDrive safety service.

Now, with SmartDrive 360, fleets have near-instant access to video, providing quicker insight and more information, so they can resolve issues quickly and keep their driver and vehicle protected - and on the road.

## **ENHANCED SAFETY THROUGH EXTENDED RECORDING**

When you do not want to miss any events of interest, SmartDrive Extended Recording can be added to SmartDrive 360. Now you can capture an uninterrupted and comprehensive video of events that happen to your vehicles and drivers whenever and wherever they occur, with all four cameras.

Adding Extended Recording provides fleets with access to continuous recording and the option to select from 100 to 200 vehicle operating hours of additional video context. Now you can protect your fleets in costly low-impact collisions like side-swipes and reversing collisions, and no-impact incidents including security and theft situations, compliance audits, compensation claims and delivery verification. You also capture an accurate record of the events preceding and following an incident, such as a collision, attack on a driver or unruly passenger behaviour.

Get the complete coverage your drivers deserve. Get SmartDrive 360 with Extended Recording.
