

Extended Recording

Protecting your fleet and drivers beyond driving

Video-based safety systems do a great job of telling you what happened when a high-impact event occurs. But, they don't always capture everything. That's when SmartDrive Extended Recording can help.

In addition to ensuring that you never miss a driving incident, Extended Recording ensures you gain additional pre and post event insights to incidents and collisions. SmartDrive's latest state-of-the-art hardware, SR4, now offers extended recording via a solid state drive to provide longer life and more storage to support the demands of 360-degree deployments.

SmartDrive Extended Recording continuously records video providing valuable context - helping you understand a variety of different situations not covered by the standard SmartDrive video platform, including:

- Thefts
- Personal injury claims
- Driver compliance with company policy
- Non-driving situations, including deliveries and use of specialised equipment
- Minor accidents such as sideswipes that may not otherwise trigger the camera
- Attacks on a driver or other unruly behaviour
- Mirror strikes

SmartDrive Extended Recording, with unmatched video recording capability, helps you capture and store an uninterrupted and comprehensive picture of events that happen to your fleet vehicles and drivers - whenever and wherever they occur.

More insight more protection

Accurate and sustaining view
of what actually happens

- **Supports constant video coverage of fleet vehicles and behaviours of drivers and passengers while on the road**

With up to 800 hours of recording, you get an actionable record of events for your vehicles and drivers while the vehicle is in operation.

- **Protects your driver's well-being and actions after an incident**

Provides indisputable evidence of events surrounding, or in the vehicle; your not-at-fault drivers can be exonerated.

- **Shields your fleet from theft or unscrupulous insurance fraud**

Security of an unattended vehicle is enhanced should the driver step away; quick assessment of what really happened can help reduce insurance fraud and your liability.

Extended recording features

Up to 800 hours of continuous recording

You can choose from three different configurations - up to 512 GB - to support up to 800 hours of continuous recording, based on feeds from two video channels.

Multiple camera video capture

Extended Recording captures video from up to four cameras, providing valuable insight into what is occurring in and around the vehicle.

Order events

You can order Extended Recording episodes for a full day (24 hours). When the Extended Recording episodes are returned, each one is reviewed against our 85+ safety observations and scored according to your fleet's risk profile.

Ignition off configurable

Extended Recording can be configured after the vehicle's ignition is off, capturing incidents after driving is complete.
